Integrated Information Management System

The utilization of a Unique ID is vital for client identification throughout the sign-up process. Patients, as the primary clients, will receive a distinct code that corresponds to their mobile number or email address upon registration on our website. This measure guarantees the safety and security of their personal information, effectively preventing any potential data breaches.

end-to-end encryption ensures the utmost level of data security. By implementing this exclusive password, the likelihood of data loss for the clients is virtually non-existent, as it is diligently protected through end-to-end encryption. These codes are conveniently generated by AI, facilitating ease for our customers/clients and significantly increasing the complexity of hacking attempts.

AI will provide policymakers with the most frequently used term in beneficiaries' feedback. The users' feedback, regardless of its positivity or negativity, will be categorized and presented in a tabulated form using AI. Policymakers can promptly utilize this feedback to inform their decision-making processes.

Thorough analysis of patient-wise, centre-wise, or state-wise details is of utmost importance. It is crucial to meticulously examine and categorize all data based on its source, the location.
